

Radio Alarm Monitoring

Most secure method of monitoring alarm systems

Radio is a more secure technology than either WiFi, Landline or Cellular communications. It operates independently of all other forms of communication insuring no single point of failure and ideal for use in high security situations. As well as being more secure than phone signals, radio signals travel quicker from the point of activation to the Remote Monitoring Centre enabling a speedier response.

Foreseeing the need for a 2nd extra secure line of defence, Top Security pioneered the use of radio for alarm monitoring purposes in Ireland. Top Security was the first security Remote Monitoring Centre in Ireland to be authorised for long range radio alarm monitoring. Today Top Security offers its service on a nationwide basis through a network of high site repeaters boasting the most extensive private radio network available in Ireland.

Long range wireless radio monitoring, provides a highly secure and reliable backup to the Remote Monitoring Centre and eliminates the 'weak link' in conventional alarm systems. Radios can be positioned in a secure location making access difficult. The intruder is less likely to compromise the physical radio and it is more difficult to block radio signals than either WiFi, Landline or Cellular.

Benefits of Radio Alarm Monitoring

- Truly resilient
- More reliable and secure
- Protects people, property and business assets
- Regular polling to insure system is live
- Signals travel quicker enabling quicker response times
- Nationwide coverage

Support

Top Security can help you with any information or queries you have in relation to Radio Alarm Monitoring. Our highly trained technicians are available 24/7 to help with any queries, provide guidance and give feedback as required.

A knowledge leader in security

Radio Alarm Monitoring, managed by Top Security, gives you state-of-the-art security in innovative and cost-effective packages. Cutting edge technology and software create real-time security that helps prevent incidents, optimises security officer's time and reduces costs. Top Security can design, install and maintain the technology equipment used for this service.

Top Security offers a broad range of services that include specialised guarding, technology solutions, mobile guarding and corporate risk management; we customise offerings that are suited to the individual customer's needs. From small businesses to large corporations, our employees make a difference every day.

How Radio Alarm Monitoring Works

- Where an alarm activates a signal is generated via the radio advising the Remote Monitoring Centre of the nature of the alert.
- This signal reaches Top Security by relaying itself through a network of repeaters to one of our Remote Monitoring Centres in Dublin and Cork.
- As well as being more secure than other forms of transmission, radio signals are harder to compromise and travel quicker from the point of activation to the Remote Monitoring Centre.
- Using radio in conjunction with the traditional forms of alarm monitoring provides customers with a second line of defence and true resilience.

For more information on how Top Security can offer integrated guarding alternatives for your security program, please contact us at Dublin 01-4900333, Cork 021-4968967 or visit www.topsecurity.ie
