TOP SECURITY
THE SIGN OF SECURITY

ONE MINUTE IS ALL IT TAKES FOR YOUR BUSINESS OR HOME TO BE BURGLED!

An immediate response reduces the risk of loss, damage and personal injury.
A Monitored Alarm System means TOP Security is working for you 24 hours a day.

Bells and sirens alone can no longer guarantee a response to your Alarm System.

Monitoring brings your Alarm System to life, linking it directly to the Control Station, with Controllers on standby ready to respond to the signalled emergency.

Only those who have been victims of a break in or personal attack will fully understand the hopeless feeling of devastation and loss that ensues. While it is impossible to prevent an attempted break in, the immediate response that monitoring provides dramatically minimises the potential risk of loss and damage to your property.

Detection of intruder... Central monitoring station alerted... Keyholder and Gardaí put on notice.

Detection...

Alerted...

Informed...

How it works

1. An alarm system activates and a signal is sent to the Central Monitoring Station.
2. The Monitoring Station receives a signal and the customer's details automatically flash on the screen within seconds.
3. The method of signalling automatically tells the controller the nature of the alarm i.e. burglary, fire, personal attack etc.
4. To eliminate false alarms the controller may telephone your premises.

Should an incorrect passcode be given or no reply received, it will be treated as an emergency.
5. A controller immediately acts on your behalf notifying the Gardaí, keyholders and other relevant emergency services.
6. All information in respect of the activation and subsequent actions taken are recorded on a real time basis.

This information can be recalled at any time.

FACT

In excess of 70% of premises that are broken into don't have a monitoring service.

Effective security means making sure every link in the chain of protection is strong.

The people behind our Monitoring Service are reliable security-conscious personnel with the necessary training and experience.

A sophisticated communications system and the necessary back-up facilities give them the confidence to set about fulfilling their duties in a professional manner.
